**ABSTRACT**

*Garbage is a form of problematics and can become a disaster in the future if it is not managed properly and wisely. In 2018, Indonesia was recorded as the second largest producer of plastic waste after China. With a total of 64 million tons / year and 3.2 million tons / year discharged into the sea. And the other main factor is the important role of waste for the community is still minimal, resulting in damage to the ecosystem by human resources.*

*Researchers see the main problem is human resources, which must be the development and empowerment, so that results in concrete implementation. This is where researchers explore the foundation based on religion and ecosystems and create a scheme for developing productive cash waqf and waste banks as an effort to empower human resources.*

*In this study, researchers used a qualitative research methodology with Literature Study, and Field Study, because researchers took and analyzed data from several journals and other writings as well as group discussions with informants including: Village Apparatus, Chair of Bumdes, Chair of Garbage Bank, Karang Cadets and Villagers.*

**Keywords: Waste Bank, Productive Waqf, Development Scheme.**
